Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 152-213 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vermeer (5,880,076).

Vermeer teaches novel personal products (compositions) that are pearlescent which comprises surfactants, viscosity control agents, fatty acids, fatty alcohols, siloxane elastomers, amphiphilic polymers, pigments and dyes. Note particular to column 17, lines 49-50 shows that sodium hydroxide is used in the compositions. Note column 34, lines 18-31 shows the fatty acids used. Note column 34, lines 51-56 shows the pigments and dyes (colorants) used in the compositions. Note column 36, lines 9-20 for the polyols (same as applicants' claim 152, component (III)).

The instant invention differs from the cited reference in that the cited reference does not teach the percent weight of each component to formulate the instant composition. However, to determine the percent weight of each component having the optimum effectiveness together is well within the level of one having ordinary skill in the art, and the skilled artisan would have been motivated to determine optimum percent weight of each component to get the maximum effectiveness in the absence of evidence to the contrary.

The instant invention differs from the cited reference in that the cited reference does not teach the ratio of each component to formulate the instant composition. However, to determine the ratio of each component having the optimum effectiveness together is well within the level of one having ordinary skill in the art, and the skilled artisan would have been motivated to determine optimum ratio of each component to get the maximum effectiveness in the absence of evidence to the contrary.

Claims 152-213 are not allowed,
